

MIDA SAN 311 KZ WIPES

Propanol-based impregnated wipes

DESCRIPTION & APPLICATION

MIDA SAN 311 KZ WIPES are moist, ready-to-use perforated tissues for use in the disinfecting of all food preparation surfaces, machinery and equipment, ideally which already have been cleaned with an appropriate detergent. They hold good levels of **MIDA SAN 311 KZ**– Christeyns Food Hygiene's blend of (non-drinking, non-ethyl alcohol/ethanol) fast evaporating alcohol disinfectant, which dries leaving NO RESIDUES.

MIDA SAN 311 KZ WIPES are available in two pack sizes. The 800 sheet pack is based on a quality non-woven low fibre tissue of approximately 20x20cm which will withstand tough manual handling. The 1500 sheet pack is a plain blue tissue, which is very strong in all directions. It is 17.7x18cm and has very low free-fibre.

MIDA SAN 311 KZ WIPES are suitable for use on all surfaces but as they are flammable care should be taken near sources of ignition, unprotected electrical equipment, hot surfaces etc.

USE INSTRUCTIONS

MIDA SAN 311 KZ WIPES are supplied ready to use. Simply open the centre-feed lid on the pack, pull-out the required number of wipes, tear-off at a perforated point and close the lid.

MIDA SAN 311 KZ WIPES should be used immediately (not allowed to dry-out) and applied manually to the surface or equipment to be treated with a criss-cross motion. Minimum contact time 1 minute.

Once disinfected the probe should be left to air-dry. No rinse is required. The wipes must only be used once and then discarded.

PRODUCT CHARACTERISTICS

Composition	Contains a solution of MIDA SAN 311 KZ
Appearance	Blue tissues
Odour	Alcoholic
Flash point c.c (Liquid)	28.5°C

MATERIALS COMPATIBILITY

MIDA SAN 311 KZ WIPES are safe to use on all surfaces including soft metals such as aluminium.

SAFETY

Carefully read the safety data sheet of **MIDA SAN 311 KZ WIPES** and follow the chemical handling and disposal guidance.

Care should be taken when using **MIDA SAN 311 KZ WIPES** near sources of ignition, unprotected electrical equipment, hot surfaces etc. "Fresh" wipes from a tub will burn in contact with a naked flame.

Used wipes for disposal remain a burning risk to a naked flame for approximately 1 minute.

STORAGE

Store **MIDA SAN 311 KZ WIPES** in their original packaging between 5°C and 35°C.
Always store in original CLOSED container away from extremes of temperature, sources of ignition and out of direct sunlight.
Shelf life: Minimum of one year.

PACKAGING

800 tissues in a centre-feed bucket
1,500 tissues in a centre-feed bucket
2,000 tissues in a QRD bag
